

## Leitz CMMs

The Leitz range of ultra-accurate CMMs and Quindos software are available in North America through the Brown & Sharpe network of precision centers and resellers.

Leitz is focussed on the development and manufacturing of high precision Coordinate Measuring Machines and Gear Testers. The Leitz CMMs cover all measuring ranges, from standard to very large scale machines with strokes of 8000 x 3850 x 3700mm.

From the tiny gears of a mechanical wrist watch to a huge ship diesel engine or even a whole satellite, parts of any size are measured on Leitz Coordinate Measuring Machines with maximum precision.

Together with PC-DMIS or QUINDOS software, not only standard parts, but almost all special geometries such as spiral bevel gears, worms, step gears, etc. can be measured and evaluated. Leitz Gear Measuring Technology turns coordinate measuring machines into high throughput gear testers.
